## ***DETAILED ACTION***

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09/13/2004 has been entered. Claims 1 and 3 are allowed.

### ***EXAMINER'S AMENDMENT***

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- The title has been changed as: --Magnetic Head Device with a Short Auxiliary Member--.

### ***Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance:
- As the closest reference, a combination of Nagata et al (US 5,095,397) and AAPA (Applicant admitted Prior Art) shows a magnetic head device including: a base member, a single non-magnetic layer, a lower yoke, a magnetoresistive element, an upper yoke, electrode terminals, an auxiliary member, and a slider surface on which magnetic tape slides in a first direction along which the base

Art Unit: 2652

member, the non-magnetic layer, the auxiliary member are arranged, wherein each upper surface of the base member and the auxiliary member form a slider surface, wherein a magnetic head is mounted in and the slider surface is curved; **but fails to show** that the length of the auxiliary member in a direction perpendicular to the slider surface is shorter than the length of the base member in the direction perpendicular to the slider surface, and the auxiliary member is bonded to the single non-magnetic layer at an upper position of the base member such that the electrode terminals are exposed through the single non-magnetic layer, wherein the exposed electrode terminals are arranged in the direction perpendicular to the slider surface.

- Applicant asserts: in this invention, the non-magnetic layer can be made thin, and the area of the non-magnetic layer on the slider surface can be smaller. With this structure, no recession is caused by tape sliding, and head-to-tape spacing can be small enough to obtain excellent sliding contact. And the non-magnetic layer on the slider surface has an area of 0.02 mm x 0.08 mm or less, which makes the area of the non-magnetic layer on the slider surface so small, the head-to-tape spacing becomes small enough to obtain improved sliding contact (Specification, p. 3, lines 6-18).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
